Missouri Wing, Civil Air Patrol, has embarked on a project to launch Simulated Satellite payloads (SimSats) into Near Space, at or above 100,000 feet using High Altitude Balloons as the launch vehicle.

This is an Aerospace Education program that will enable participants to gain knowledge in a wide variety of fields, such as Amateur Radio, weather, space science, engineering, program management, telemetry systems, experiment design, cosmic ray studies, atmospheric studies and more.

Our goal is to provide education opportunities and monthly launch, tracking and recovery services for Amateur Radio Groups, High Schools, Community colleges, Technical Schools, CAP Squadrons and other interested groups.
